EVIRONMENTAL STATEMENT
K239CH COLORADO SPRINGS, COLORADO, CH. 239D
UNITED STATES CP, LLC
FCC FORM 349
APRIL 2018

The applicant proposes replacing its current antenna on an existing 9 meter un-registered tower. The proposed Center of Radiation will be 8 meters Above Ground Level. A circular polarization, Scala model CA-2-CP, directional yagi antenna is proposed. Calculations were made using FM Model for Windows, version 2.10. The proposed antenna Center of Radiation, above ground, was reduced by 2 meters to allow for the average height of a human on the ground. FM Model predicts a peak exposure of 110.1 μw/cm² at a distance of 2 meters from the base of the tower. This represents 55 % of the allowable Maximum Permissible Exposure ("MPE") of 200 μw/cm² for uncontrolled environments at any point on the ground. Since the Scala antenna is not specifically listed in the FM Model program, the worse case "Type 1" antenna was used for the study.

The applicant will ensure that the public access to the tower is restricted by fencing, anti-climb devices or other appropriate measures. The site will be posted with RF warning signs. If climbing of the tower by authorized personnel becomes necessary, transmitter power will be reduced to safe operating levels, or transmission even terminated, as necessary as not to exceed the RF exposure limits to tower workers. The licensee will cooperate with other users at the site with the scheduling of such tower or antenna maintenance.

No modification of the existing tower is proposed, other then the proposed side mounting of the antenna system and addition of a transmission line. The tower was constructed prior to March 16, 2001. The National Programmatic Agreement generally allows such a collocation without consultation or review under Section 106 and Subpart B of 36 CFR §800. The applicant believes that it is in full compliance with the Agreement, and that no further study is required.
