

EXHBIT E-1
TECHNICAL STATEMENT
K280EQ FORT MORGAN, COLORADO
CEDAR COVE BROADCASTING, INC.
FCC FORM 349
MARCH 2007

This Technical Statement is in support of a minor change application for K280EQ(CP) facility ID 151241, Fort Morgan, Colorado.

It seeks to change its transmitter location, and to specify operation on its I.F. channel 226, in place of channel 280. Channel 226 will provide for less potential interference to other stations.

Figure 1 shows a channel study which shows that there will not be any prohibitive overlap with any other stations or authorizations on channel 226.

Figure 2 shows an interference study conducted against KTCL Fort Collins operation on channel 227C. It shows that the 54 dbu interference contour of the proposed operation of K280EQ will not overlap with the licensed 60 dbu protected contour of KTCL.

Figure 3 shows that the new proposed operation of K280EQ will be mutually exclusive with the present construction permit for K280EQ. The 60 dbu contour of the new proposed operation of K280EQ will overlap with the current 60 dbu contour as specified in its current construction permit.
